

Ralphie's Junk

Members: Ameya Bahirat, Elias Bezanis, David Bostany, Kevin Macias

Asana Project Tracker:

To access the project tracker, go to asana and sign in as ralphies.junk@yahoo.com with password 'ralphiesjunk'. Our project tracking is located in the website processes tab on the left side of the website. (Make sure to change view completed tasks to view all tasks, clicking on the tasks will also show subtasks and commentary on changes)

The csci-3308-email@googlegroups.com has been given access as well, but the email we

provided is there just in case

Sep 20, 2015 – Dec 7, 2015

Contributions to master, excluding merge commits

Contributions: **Commits** ▾

Deployment:

- This guide assumes that some form of Apache, SQL, and PHP web stack is installed on the computer, options for this include XAMPP, WAMP and MAMP
- Go to htdocs folder inside the MAMP/XAMPP/WAMP folder and paste all files located inside repository
- Power the server and go to localhost/phpmyadmin
 - if using XAMPP you just need the apache server running
 - if using MAMP you just need to hit the power button on the application
- On the left create a new database called 'CXC', click on the newly created database and import the CXC.sql file
- Now go to localhost/rj_reg.php
- From here you should be able to maneuver through the website
- Refer to README in git repository for issues

Autodoc:

Doxygen: <http://www.stack.nl/~dimitri/doxygen/>

Github Link: <https://github.com/PorkoRosso/DevTeam/tree/master/autodoc>

Note:

- Autodoc pdf is located in the master branch of the repository.
- Instructions on how to access autodoc html are in README.md

Be sure to:

-Tag repo with “Final Submission”
